

ARNOLD® Ergonomic handle with flag

USABLE FOR WIRELESS OR
WIRED WHEEL CHOCK

part number: 706120011

Description

The two handles which are integrated in the flagpole together with the ergonomic handle on the chock itself make it possible to place the chock conveniently at the truck's wheel.

At the same time the truck driver can clearly see with a view into the rearview mirror or out of the window, if the chock is placed under the wheel thanks to the clearly visible red side of the flag.

The loading personnel is informed through the green side of the flag that the chock is placed at the wheel and therefore a safe loading process can take place.
